For Windows 2000 SP4/Me/XP, Mac OS 10.0 and Linux OS 2.42 higher versions you do not need driver, your computer will automatically find the unit when you plug in, but the other versions your computer need to install the driver. For installation of the driver, please see following part:

Installation guide:

- 1.Startup your computer.
- 2.Insert the software driver CD into your CD-ROM drive.
3. You can find the two files in the driver CD, please choose file “AU6368.exe” to run the installation:

Click the "Next" button to continue.

Now, please connect your card reader to the computer. Click “OK”, then click “Next” to continue.

Click “Finish” to end the installation, then restart your computer.

4.The following icons of the reader will show up in “My Computer”.

Cautions in use:

1. If the system can't find new hardware when you plug card reader into your computer, please startup the USB controller in BIOS.
2. Plug card into the right slot and don't mix up.
3. Do not extract card reader when it is on operation for fear drop information stored in the card or even the loss of the whole system.

Accessories:

- 1.19in1 card reader/Writer
- 2.USB extension cable
- 3.Driver CD
- 4.User's manual
